DETAILED ACTION

1. Applicant's arguments, see Response, filed on 4/11/2008, with respect to the requirement for election Species and Sub-species as made in the previous Office action, have been fully considered and are persuasive. The requirement for election Species and Sub-species as made in the previous Office action has been withdrawn. All claims 10-21 are examined in this application.

Priority

2. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 09/520,836, filed on 03/08/2000.

Claim Objections

3. Claims 11, 17-21 are objected to because of the following informalities:
Claim 11 (lines 8-9), "effective scanning lines N" should be changed to --effective scanning lines M--.

Claims 17-21 are objected as being dependent on claim 11.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 2622

5. Claims 10-21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Regarding claim 10, the specification does not have support for the limitation “a driver to drive the image sensing device to vertically mix or cull signal charges in individual pixels of K pixels to produce, during a vertical effective scanning period of the television system, *a number of lines of output signals which corresponds to 1/K the number of vertically arranged pixels N of the image sensing device*”.

Claims 12-16 are rejected as being dependent on claim 10.

Regarding claim 11, the specification does not have support for the limitation “a second driver to drive the image sensing device to vertically mix or cull signal charges in individual pixels of K pixels to produce, during a vertical effective scanning period of the television system, *a number of lines of output signals which corresponds to 1/K the number of vertically arranged pixels N of the image sensing device*”.

Claims 17-21 are rejected as being dependent on claim 11.
